

# BIOGAS UPGRADING BIOBASIC

## RECOVER YOUR BIO-METHANE

Biogas is a key renewable energy source. Pentair is your partner in turning waste streams into sustainable energy solutions and valuable revenue streams.

The simple approach to turning biogas into bio-methane is realized with Pentair's **BioBasic**, which recovers bio-methane as a replacement for fossil based natural gas while meeting quality requirements in a cost-efficient solution. The system is easily integrated with upstream and downstream equipment providing high operational readiness and availability (uptime). The BioBasic is delivered to site after a short and optimized fabrication time allowing for rapid project execution.

The bio-methane can be injected into existing gas grids as a sustainable replacement of fossil natural gas or it can be utilized as fuel – either as Renewable Compressed Natural Gas (Renewable CNG) or Renewable Liquid Natural Gas (Renewable LNG). Utilizing bio-methane eliminates fossil fuel based carbon emissions in industrial and domestic environments, transportation, electricity and heat production.

*Did you know that our membrane and amine based upgrading technologies are both compatible with our efficient CO<sub>2</sub> technologies? Pentair can provide you with the unique opportunity to add another carbon intensity lowering revenue stream to your biogas plant: food-grade CO<sub>2</sub>. Needless to say, our products help you control the impurities to produce bio-methane in the most efficient process – with zero methane slip.*

## BENEFITS

- **Cost-effective upgrading of biogas to bio-methane**
- **Low Total Cost of Ownership (TCO)**
- **Increased biogas value with market demand shift from electricity to bio-methane production**
- **Optional Enclosed Skid solution for ease of installation/relocation and low noise**
- **Small footprint and skid height**
- **Rapid project execution**
- **24/7 remote service and support for high reliability (availability)**

## OPTIONS

- Enclosed Skid plug and play unit
- Biogas blower
- Activated carbon-based bulk pre-treatment (H<sub>2</sub>S and VOC)
- Scrubber
- Gas Entry Unit
- CNG compression and storage solutions
- Installation and commissioning services
- Zero methane emission

# BIOBASIC

## PROCESS DESCRIPTION

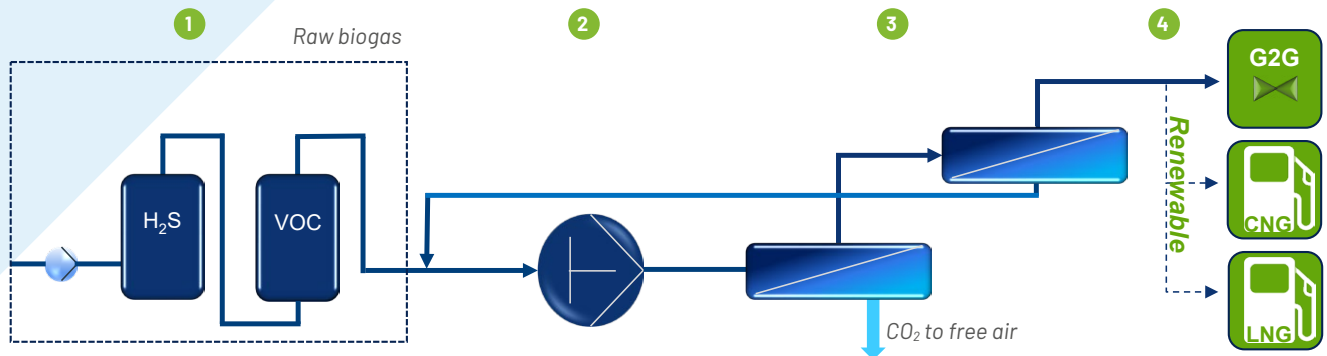

In the pre-treatment, water and contaminants are removed from the biogas. The basic biogas treatment allows for modest contaminations levels of hydrogen sulfide (H<sub>2</sub>S) and volatile organic compounds (VOC) – for bulk removal of H<sub>2</sub>S or VOC's, other options are available. After pre-treatment, the biogas is compressed to the most OPEX and CAPEX efficient pressure for that allows for removal of CO<sub>2</sub>. The membranes then remove the CO<sub>2</sub> from the methane to meet the required Renewable Natural Gas (RNG) specifications. Upgraded bio-methane can be injected into the national grid or further processed to renewable CNG or LNG.

## WHY PENTAIR?

Pentair's Sustainable Gas Solutions specializes in biogas upgrading and CO<sub>2</sub> recovery systems. With over 1500 installed plants, including more than 40 biogas upgrading systems, Pentair's dedication to this core business is widely recognized within the industry. Our R&D department is constantly researching emerging technologies for improving the efficiency and effectiveness of our biogas upgrading solutions. Most importantly: we are there for you when your system is operating – with global service hubs and dedicated technical support. We diagnose and optimize whenever you need us to keep your plant up and running! *That's why Pentair!*

## SCOPE OF SUPPLY

- 1 Pre-treatment biogas (booster with activated carbon filters for H<sub>2</sub>S and VOC)
  - 2 Biogas compressor
  - 3 2-stage membrane unit
  - 4 Biogas outlet gas to grid or optional CNG or Bio-LNG
- > Main parts skid mounted and controlled MCC

	BIOGAS CAPACITY	TYPICAL BIOGAS COMPOSITION	FOOTPRINT (L x W x H)	POWER CONSUMPTION	TYPICAL BIO-METHANE OUTLET CONDITIONS	BIO-METHANE TO THE GRID
BioBasic	700 - 2200 Nm <sup>3</sup> /h 435 - 1365 SCFM	55 % CH <sub>4</sub> , 44% CO <sub>2</sub> , 1% air	12.8 x 10 x 2.8 m 42 x 32.8 x 9.2 ft	~ 250 Wh/Nm <sup>3</sup>	> 90 - 97 % CH <sub>4</sub>	Renewable CNG/ Renewable-LNG
BioPlus	700 - 2200 Nm <sup>3</sup> /h 435 - 1365 SCFM	55 % CH <sub>4</sub> , 44% CO <sub>2</sub> , 1% air	20 x 12.5 x 3.6 m 65.6 x 41 x 11.8 ft	~ 235 Wh/Nm <sup>3</sup>	> 90 - 97 % CH <sub>4</sub>	Renewable CNG/ Renewable-LNG
BioComplete	700 - 3600 Nm <sup>3</sup> /h 435 - 2234 SCFM	55 % CH <sub>4</sub> , 44% CO <sub>2</sub> , 1% air	20 x 20 x 3.6 m 65.6 x 65.6 x 11.8 ft	~ 180 Wh/Nm <sup>3</sup> ~ 220 Wh/kg (CO <sub>2</sub> )	> 90 - 97 % CH <sub>4</sub>	Renewable CNG/ Renewable-LNG
